# Massimo Listri: The Invention of Space

## Editor's Description

"The Invention of Space" features more than 50 pieces of large-scale indoor photography by the Italian artist Massimo Listri. The Italian artist began working with art and architecture magazines since he was 17. His work is known for its magnificent, open interior imagery, often photographed in castles, abandoned houses, libraries, cathedrals, and theaters, and symmetrical spatial composition directs the line of sight into the deep space within the frame. The exhibition runs from 10am - 6pm everyday except Mondays. Free of charge.
